WASHER/DRYER SAFETY

Your safety and the safety of others are very important.

We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

This is the safety alert symbol.

This symbol alerts you to potential hazards that can kill or hurt you and others.

All safety messages will follow the safety alert symbol and either the word “DANGER” or “WARNING.”

These words mean:

⚠ DANGER

You can be killed or seriously injured if you don't immediately follow instructions.

⚠ WARNING

You can be killed or seriously injured if you don't follow instructions.

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

WARNING - “Risk of Fire”

- Clothes dryer installation must be performed by a qualified installer.
- Install the clothes dryer according to the manufacturer's instructions and local codes.
- Do not install a clothes dryer with flexible plastic venting materials. If flexible metal (foil type) duct is installed, it must be of a specific type identified by the appliance manufacturer as suitable for use with clothes dryers. Flexible venting materials are known to collapse, be easily crushed, and trap lint. These conditions will obstruct clothes dryer airflow and increase the risk of fire.
- To reduce the risk of severe injury or death, follow all installation instructions.
- Save these instructions.

INSTALLATION INSTRUCTIONS

Tools and Parts

Gather the required tools and parts before starting installation. Read and follow the instructions provided with any tools listed here.

Parts needed for washer (not provided):

- Inlet hoses
- Flat washers

To order:

- Call the dealer from whom you purchased your washer/dryer.
- Call the toll-free number listed on the cover of the Washer/Dryer User Instructions.
- Visit the website listed on the cover of the Washer/Dryer User Instructions.

NOTE: Replace inlet hoses after 5 years of use to reduce the risk of hose failure. Record hose installation or replacement dates for future reference.

Tools needed:

- #2 Phillips and flat-blade screwdriver
- Adjustable wrench that opens to 1" (25 mm) or $\frac{9}{16}$ " open-end wrench (for adjusting dryer feet)
- Wire stripper (direct wire installations)
- $\frac{1}{4}$ " nut driver or socket wrench (recommended)
- Tin snips (for new vent installations)
- Caulking gun and compound (for installing new exhaust vent)
- Level
- Knife
- Vent clamps
- Pliers
- Scissors
- Wood block (for leveling)
- Ruler or measuring tape

Parts supplied:

Remove parts package from the washer basket. Check that all parts were included.

A. Rear leveling legs (2)
B. Front leveling legs (2)
C. Drain hose

D. Plastic strap
E. Silver double-wire hose clamp

Parts needed:

Check local codes. Check existing electrical supply and venting, and see "Electrical Requirements" and "Venting Requirements" before purchasing parts.

Mobile home installations require metal exhaust system hardware available for purchase from the dealer from whom you purchased your washer/dryer. For further information, please reference the "Assistance or Service" section of the Washer/Dryer User Instructions.

Alternate Parts

Your installation may require additional parts. For information on ordering, please refer to the toll free phone numbers on the front page of the Washer/Dryer User Instructions.

If You Have	You Will Need to Buy
Laundry tub or standpipe taller than 96" (2.4 m)	Sump pump system (if not already available)
1" (25 mm) diameter standpipe	2" (51 mm) diameter to 1" (25 mm) diameter standpipe adapter, Part Number 3363920
Overhead sewer	Standard 20 gal. (76 L) 34" (864 mm) tall drain tub or utility sink and sump pump (available from local plumbing suppliers)
Floor drain	Siphon break, Part Number 285320, additional drain hose, Part Number 285702 and connector kit, Part Number 285442
Drain hose too short	Drain hose, Part Number 285664 and connector kit, Part Number 285442
Lint clogged drain	Drain protector, Part Number 367031
Water faucets beyond reach of fill hoses	2 longer water fill hoses: 6 ft (1.8 m) Part Number 76314, 10 ft (3.0 m) Part Number 350008

Location Requirements

⚠ WARNING

Explosion Hazard

Keep flammable materials and vapors, such as gasoline, away from dryer.

Failure to do so can result in death, explosion, or fire.

You will need

- A location that allows for proper exhaust installation. See "Venting Requirements."
- A separate 30-amp circuit.
- If you are using a power supply cord, a grounded electrical outlet located within 2 ft (610 mm) of either side of the washer/dryer. See "Electrical Requirements."
- A sturdy floor to support the washer/dryer weight (washer/dryer, water and load) of 500 lbs (226.8 kg).

- A level floor with a maximum slope of 1" (25 mm) under entire washer/dryer. Clothes may not tumble properly and automatic sensor cycles may not operate correctly if washer/dryer is not level. Installing on carpet is not recommended.
- A water heater set to deliver 120°F (49°C) water to the washer.
- Hot and cold water faucets located within 4 ft (1.2 m) of the hot and cold water fill valves, and water pressure of 5-100 psi (34.5-689.6 kPa).

The washer/dryer must not be installed or stored in an area where it will be exposed to water and/or weather.

Do not operate your washer in temperatures at or below 32°F (0°C). Some water can remain in the washer and can cause damage in low temperatures. See "Washer/Dryer Care" in the Washer/Dryer User Instructions for winterizing information.

Do not operate your dryer at temperatures below 45°F (7°C). At lower temperatures, the dryer might not shut off at the end of an automatic cycle. This can result in longer drying times.

Check code requirements. Some codes limit, or do not permit, installation of the washer/dryer in garages, closets, mobile homes, or sleeping quarters. Contact your local building inspector.

Installation Clearances

The location must be large enough to allow the dryer door to open fully.

Washer/Dryer Dimensions

*Most installations require a minimum 5" (127 mm) clearance behind the dryer for the exhaust vent with elbow. See "Venting Requirements."

Installation spacing for recessed area or closet installation

The following spacing dimensions are recommended for this washer/dryer. This washer/dryer has been tested for spacing of 0" (0 mm) clearance on the sides. Recommended spacing should be considered for the following reasons:

- Additional spacing should be considered for ease of installation and servicing.
- Additional clearances might be required for wall, door, and floor moldings.
- Additional spacing on all sides of the washer/dryer is recommended to reduce noise transfer.

- For closet installation, with a door, minimum ventilation openings in the top and bottom of the door are required. Louvered doors with equivalent ventilation openings are acceptable.

A. Recessed area

B. Side view - closet or confined area

C. Closet door with vents

*Required spacing

**Rear clearance may be 0" (0 mm) when house exhaust system is lined up directly with dryer exhaust.

Mobile Home - Additional Installation Requirements

This washer/dryer is suitable for mobile home installations. The installation must conform to the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280 (formerly the Federal Standard for Mobile Home Construction and Safety, Title 24, HUD Part 280).

Mobile home installations require:

- Metal exhaust system hardware, which is available for purchase from your dealer.
- Special provisions must be made in mobile homes to introduce outside air into the dryer. The opening (such as a nearby window) should be at least twice as large as the dryer exhaust opening.

Drain System

The washer/dryer can be installed using the standpipe drain system (floor or wall), the laundry tub drain system, or the floor drain system. Select the drain hose installation method you need. See "Alternate Parts."

Standpipe drain system - wall or floor (views A & B)

The standpipe drain requires a minimum diameter standpipe of 2" (51 mm). The minimum carry-away capacity can be no less than 17 gal. (64 L) per minute. A 2" (51 mm) diameter to 1" (25 mm) diameter standpipe adapter kit is available. See "Alternate Parts."

The top of the standpipe must be at least 39" (991 mm) high and no higher than 96" (2.4 m) from the bottom of the washer.

Laundry tub drain system (view C)

The laundry tub needs a minimum 20 gal. (76 L) capacity. The top of the laundry tub must be at least 34" (864 mm) above the floor and no higher than 96" (2.4 m) from the bottom of the washer.

Floor drain system (view D)

The floor drain system requires a siphon break that may be purchased separately. See "Alternate Parts."

The siphon break must be a minimum of 28" (711 mm) from the bottom of the washer. Additional hoses might be needed.

Electrical Requirements

It is your responsibility

- To contact a qualified electrical installer.
- To be sure that the electrical connection is adequate and in conformance with the National Electrical Code, ANSI/NFPA 70-latest edition and all local codes and ordinances.

A copy of the above code standards can be obtained from: National Fire Protection Association, One Batterymarch Park, Quincy, MA 02269.

- To supply the required 3 or 4 wire, single phase, 120/240 volt, 60 Hz., AC only electrical supply (or 3 or 4 wire, 120/208 volt electrical supply, if specified on the serial/rating plate) on a separate 30-amp circuit, fused on both sides of the line. A time-delay fuse or circuit breaker is recommended. Connect to an individual branch circuit. Do not have a fuse in the neutral or grounding circuit.
- Do not use an extension cord.
- If codes permit and a separate ground wire is used, it is recommended that a qualified electrician determine that the ground path is adequate.

Electrical Connection

To properly install your washer/dryer, you must determine the type of electrical connection you will be using and follow the instructions provided for it here.

- This dryer is manufactured ready to install with a 3-wire electrical supply connection. The neutral ground wire is permanently connected to the neutral conductor (white wire) within the dryer. If the dryer is installed with a 4-wire electrical supply connection, the neutral ground wire must be removed from the internal ground connector (green screw), and secured under the neutral terminal (center or white wire) of the terminal block. When the neutral ground wire is secured under the neutral terminal (center or white wire) of the terminal block, the dryer cabinet is isolated from the neutral conductor.
- If local codes do not permit the connection of a neutral ground wire to the neutral wire, see "Optional 3-wire connection" section.
- A 4-wire power supply connection must be used when the appliance is installed in a location where grounding through the neutral conductor is prohibited. Grounding through the neutral is prohibited for (1) new branch-circuit installations, (2) mobile homes, (3) recreational vehicles, and (4) areas where local codes prohibit grounding through the neutral conductors.

If using a power supply cord:

Use a UL listed power supply cord kit marked for use with clothes dryers. The kit should contain:

- A UL listed 30-amp power supply cord, rated 120/240 volt minimum. The cord should be type SRD or SRDT and be at least 4 ft (1.22 m) long. The wires that connect to the dryer must end in ring terminals or spade terminals with upturned ends.
- A UL listed strain relief.

If your outlet looks like this:

4-wire receptacle (14-30R)

Then choose a 4-wire power supply cord with ring or spade terminals and UL listed strain relief. The 4-wire power supply cord, at least 4 ft (1.22 m) long, must have four 10-gauge copper wires and match a 4-wire receptacle of NEMA Type 14-30R. The ground wire (ground conductor) may be either green or bare. The neutral conductor must be identified by a white cover.

If your outlet looks like this:

3-wire receptacle (10-30R)

Then choose a 3-wire power supply cord with ring or spade terminals and UL listed strain relief. The 3-wire power supply cord, at least 4 ft (1.22 m) long, must have three 10-gauge copper wires and match a 3-wire receptacle of NEMA Type 10-30R.

If connecting by direct wire:

Power supply cable must match power supply (4-wire or 3-wire) and be:

- Flexible armored cable or nonmetallic sheathed copper cable (with ground wire), protected with flexible metallic conduit. All current-carrying wires must be insulated.
- 10-gauge solid copper wire (do not use aluminum).
- At least 5 ft (1.52 m) long.

GROUNDING INSTRUCTIONS

- For a grounded, cord-connected washer/dryer:
This washer/dryer must be grounded. In the event of malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for electric current. This washer/dryer uses a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

- For a permanently connected washer/dryer:
This washer/dryer must be connected to a grounded metal, permanent wiring system, or an equipment-grounding conductor must be run with the circuit conductors and connected to the equipment-grounding terminal or lead on the washer/dryer.

WARNING: Improper connection of the equipment-grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative or personnel if you are in doubt as to whether the washer/dryer is properly grounded. Do not modify the plug on the power supply cord: if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

SAVE THESE INSTRUCTIONS

Electrical Connection

Power Supply Cord

⚠ WARNING

Fire Hazard

Use a new UL listed 30 amp power supply cord.

Use a UL listed strain relief.

Disconnect power before making electrical connections.

Connect neutral wire (white or center wire) to center terminal (silver).

Ground wire (green or bare wire) must be connected to green ground connector.

Connect remaining 2 supply wires to remaining 2 terminals (gold).

Securely tighten all electrical connections.

Failure to do so can result in death, fire, or electrical shock.

Direct Wire

⚠ WARNING

Fire Hazard

Use 10 gauge solid copper wire.

Use a UL listed strain relief.

Disconnect power before making electrical connections.

Connect neutral wire (white or center wire) to center terminal (silver).

Ground wire (green or bare wire) must be connected to green ground connector.

Connect remaining 2 supply wires to remaining 2 terminals (gold).

Securely tighten all electrical connections.

Failure to do so can result in death, fire, or electrical shock.

1. Disconnect power.
2. Remove the hold-down screw and terminal block cover.

- A. Center silver-colored terminal block screw
- B. Hold-down screw
- C. Terminal block cover
- D. Internal ground conductor screw

3. Install strain relief.

Style 1: Power supply cord strain relief

- Remove the screws from a 3/4" (19 mm) UL listed strain relief (UL marking on strain relief). Put the tabs of the two clamp sections into the hole below the terminal block opening so that one tab is pointing up and the other is pointing down, and hold in place. Tighten strain relief screws just enough to hold the two clamp sections together.

- A. Strain relief tab pointing up
- B. Hole below terminal block opening
- C. Clamp section
- D. Strain relief tab pointing down

- Put power supply cord through the strain relief. Be sure that the wire insulation on the power supply cord is inside the strain relief. The strain relief should have a tight fit with the dryer cabinet and be in a horizontal position. Do not further tighten strain relief screws at this point.

Style 2: Direct wire strain relief

- Unscrew the removable conduit connector and any screws from a $\frac{3}{4}$ " (19 mm) UL listed strain relief (UL marking on strain relief). Put the threaded section of the strain relief through the hole below the terminal block opening. Reaching inside the terminal block opening, screw the removable conduit connector onto the strain relief threads.

A. Removable conduit connector
B. Hole below terminal block opening
C. Strain relief threads

- Put direct wire cable through the strain relief. The strain relief should have a tight fit with the dryer cabinet and be in a horizontal position. Tighten strain relief screw against the direct wire cable.

- Now complete installation following instructions for your type of electrical connection:

4-wire (recommended)

3-wire (if 4-wire is not available)

Electrical Connection Options

If your home has:	And you will be connecting to:	Go to Section
4-wire receptacle (NEMA Type 14-30R) 	A UL listed, 120/240-volt minimum, 30-amp, dryer power supply cord*	4-wire connection: Power supply cord
4-wire direct 	A fused disconnect or circuit breaker box*	4-wire connection: Direct Wire
3-wire receptacle (NEMA type 10-30R) 	A UL listed, 120/240-volt minimum, 30-amp, dryer power supply cord*	3-wire connection: Power supply cord
3-wire direct 	A fused disconnect or circuit breaker box*	3-wire connection: Direct Wire

*If local codes do not permit the connection of a cabinet-ground conductor to the neutral wire, go to "Optional 3-wire connection" section.

4-wire connection: Power supply cord

IMPORTANT: A 4-wire connection is required for all mobile homes and where local codes do not permit the use of 3-wire connections.

A. 4-wire receptacle (NEMA type 14-30R)
B. 4-prong plug
C. Ground prong
D. Neutral prong
E. Spade terminals with upturned ends
F. $\frac{3}{4}$ " (19 mm) UL listed strain relief
G. Ring terminals

- Remove center silver-colored terminal block screw.

2. Remove neutral ground wire from internal ground conductor screw. Connect neutral ground wire and the neutral wire (white or center wire) of power supply cord under center silver-colored terminal block screw. Tighten screw.

- A. Center silver-colored terminal block screw
- B. Neutral ground wire - Dotted line shows position of NEUTRAL ground wire before being moved to center silver-colored terminal block screw.
- C. Internal ground conductor screw
- D. Neutral wire (white or center wire)
- E. $\frac{3}{4}$ " (19 mm) UL listed strain relief

3. Move the green painted screw from the internal to the external ground conductor location. Connect ground wire (green or bare) of power supply cord to external ground conductor screw. Tighten screw.

- A. Neutral wire (white or center wire)
- B. Center silver-colored terminal block screw
- C. Neutral ground wire
- D. External ground conductor screw
- E. Ground wire (green or bare) of power supply cord
- F. Internal ground conductor location
- G. $\frac{3}{4}$ " (19 mm) UL listed strain relief

4. Connect the other wires to outer terminal block screws. Tighten screws.
5. Tighten strain relief screws.
6. Insert tab of terminal block cover into slot of dryer rear panel. Secure cover with hold-down screw.
7. You have completed your electrical connection. Now go to "Venting Requirements."

4-wire connection: Direct Wire

IMPORTANT: A 4-wire connection is required for mobile homes and where local codes do not permit the use of 3-wire connections.

Direct wire cable must have 5 ft (1.52 m) of extra length so washer/dryer can be moved if needed.

Strip 5" (127 mm) of outer covering from end of cable, leaving bare ground wire at 5" (127 mm). Cut $1\frac{1}{2}$ " (38 mm) from 3 remaining wires. Strip insulation back 1" (25 mm). Shape ends of wires into a hook shape.

When connecting to the terminal block, place the hooked end of the wire under the screw of the terminal block (hook facing right), squeeze hooked end together, and tighten screw. See example below.

1. Remove center silver-colored terminal block screw.
2. Remove neutral ground wire from internal ground conductor screw. Connect neutral ground wire and place the hooked end (hook facing right) of the neutral wire (white or center wire) of direct wire cable under the center screw of the terminal block. Squeeze hooked ends together. Tighten screw.

- A. Center silver-colored terminal block screw
- B. Neutral ground wire
- C. Internal ground conductor screw - Dotted line shows position of NEUTRAL ground wire before being moved to center silver-colored terminal block screw.
- D. Neutral wire (white or center wire)
- E. $\frac{3}{4}$ " (19 mm) UL listed strain relief

3. Move the green painted screw from the internal to the external ground location. Connect ground wire (green or bare) of power supply cable to external ground conductor screw. Tighten screw.

- A. Neutral wire (white or center wire)
 B. Center silver-colored terminal block screw
 C. Neutral ground wire
 D. External ground conductor screw
 E. Ground wire (green or bare) of power supply cable
 F. Internal ground conductor location
 G. $\frac{3}{4}$ " (19 mm) UL listed strain relief

4. Place the hooked ends of the other power supply cable wires under the outer terminal block screws (hooks facing right). Squeeze hooked ends together. Tighten screws.

5. Tighten strain relief screw.
6. Insert tab of terminal block cover into slot of dryer rear panel. Secure cover with hold-down screw.
7. You have completed your electrical connection. Now go to "Venting Requirements."

3-wire connection: Power supply cord

Use where local codes permit connecting cabinet-ground conductor to neutral wire.

- A. 3-wire receptacle (NEMA type 10-30R)
 B. 3-wire plug
 C. Neutral prong
 D. Spade terminals with upturned ends
 E. $\frac{3}{4}$ " (19 mm) UL listed strain relief
 F. Ring terminals
 G. Neutral (white or center wire)

1. Loosen or remove center silver-colored terminal block screw.
2. Connect neutral wire (white or center wire) of power supply cord to the center silver-colored terminal screw of the terminal block. Tighten screw.

- A. Neutral wire (white or center wire)
 B. Center silver-colored terminal block screw
 C. Neutral ground wire
 D. Internal ground conductor screw
 E. $\frac{3}{4}$ " (19 mm) UL listed strain relief

3. Connect the other wires to outer terminal block screws. Tighten screws.
4. Tighten strain relief screws.
5. Insert tab of terminal block cover into slot of dryer rear panel. Secure cover with hold-down screw.
6. You have completed your electrical connection. Now go to "Venting Requirements."

3-wire connection: Direct Wire

Use where local codes permit connecting cabinet-ground conductor to neutral wire.

Direct wire cable must have 5 ft (1.52 m) of extra length so washer/dryer can be moved if needed.

Strip $3\frac{1}{2}$ " (89 mm) of outer covering from end of cable. Strip insulation back 1" (25 mm). If using 3-wire cable with ground wire, cut bare wire even with outer covering. Shape ends of wires into a hook shape.

When connecting to the terminal block, place the hooked end of the wire under the screw of the terminal block (hook facing right), squeeze hooked end together, and tighten screw.

1. Loosen or remove center silver-colored terminal block screw.
2. Place the hooked end of the neutral wire (white or center wire) of direct wire cable under the center screw of terminal block (hook facing right). Squeeze hooked end together. Tighten screw.

- A. Neutral wire (white or center wire)
 B. Center silver-colored terminal block screw
 C. Neutral ground wire
 D. Internal ground conductor screw
 E. $\frac{3}{4}$ " (19 mm) UL listed strain relief

3. Place the hooked ends of the other power supply cable wires under the outer terminal block screws (hooks facing right). Squeeze hooked ends together. Tighten screws.

4. Tighten strain relief screw.
5. Insert tab of terminal block cover into slot of dryer rear panel. Secure cover with hold-down screw.
6. You have completed your electrical connection. Now go to "Venting Requirements."

Optional 3-wire connection

Use for direct wire or power supply cord where local codes do not permit connecting cabinet-ground conductor to neutral wire.

1. Remove center silver-colored terminal block screw.
2. Remove neutral ground wire from internal ground conductor screw. Connect neutral ground wire and the neutral wire (white or center wire) of power supply cord/cable under center silver-colored terminal block screw. Tighten screw.

- A. Neutral wire (white or center wire)
 B. Neutral ground wire
 C. External ground conductor screw
 D. Grounding path determined by a qualified electrician
 E. Internal ground conductor location

3. Connect the other wires to outer terminal block screws. Tighten screws.

4. Tighten strain relief screws.
5. Move the green painted screw from the internal to the external ground conductor location. Connect a separate copper ground wire from the external ground conductor screw to an adequate ground.
6. Insert tab of terminal block cover into slot of dryer rear panel. Secure cover with hold-down screw.

Venting Requirements

⚠ WARNING

Fire Hazard

Use a heavy metal vent.

Do not use a plastic vent.

Do not use a metal foil vent.

Failure to follow these instructions can result in death or fire.

WARNING: To reduce the risk of fire, this washer/dryer **MUST BE EXHAUSTED OUTDOORS.**

IMPORTANT: Observe all governing codes and ordinances.

The dryer exhaust must not be connected into any gas vent, chimney, wall, ceiling, attic, crawlspace, or a concealed space of a building.

If using an existing vent system

- Clean lint from the entire length of the system and make sure exhaust hood is not plugged with lint.
- Replace any plastic or metal foil vent with rigid or flexible heavy metal vent.
- Review Vent system chart. Modify existing vent system if necessary to achieve the best drying performance. Only rigid or flexible metal vent shall be used for exhausting.

If this is a new vent system

Vent material

- Use a heavy metal vent. Do not use plastic or metal foil vent.
- 4" (102 mm) heavy metal exhaust vent and clamps must be used. DURASAFE™ venting products are recommended.

4" (102 mm) heavy metal exhaust vent

DURASAFE™ vent products can be purchased from your dealer or by calling Whirlpool Parts and Accessories. For more information, see the "Assistance or Service" section of the Washer/Dryer User Instructions.

Rigid metal vent

- For best drying performance, rigid metal vents are recommended.
- Rigid metal vent is recommended to avoid crushing and kinking.

Flexible metal vent

- Flexible metal vents are acceptable only if accessible for cleaning.
- Flexible metal vent must be fully extended and supported when the dryer is in its final location.
- Remove excess flexible metal vent to avoid sagging and kinking that may result in reduced airflow and poor performance.
- Do not install flexible metal vent in enclosed walls, ceilings, or floors.
- The total length of flexible metal vent should not exceed 7 3/4 ft (2.4 m).

Elbows

45° elbows provide better airflow than 90° elbows.

Good

Better

Clamps

- Use clamps to seal all joints.
- Exhaust vent must not be connected or secured with screws or other fastening devices that extend into the interior of the duct and catch lint. Do not use duct tape.

Clamp

Exhaust

Recommended hood styles are shown here.

A. Louvered hood style

B. Box hood style

The angled hood style (shown here) is acceptable.

- An exhaust hood should cap the vent to keep rodents and insects from entering the home.
- Exhaust hood must be at least 12" (305 mm) from the ground or any object that may be in the path of the exhaust (such as flowers, rocks or bushes, snow line, etc.).
- Do not use an exhaust hood with a magnetic latch.

Improper venting can cause moisture and lint to collect indoors, which may result in:

- Moisture damage to woodwork, furniture, paint, wallpaper, carpets, etc.
- Housecleaning problems and health problems.

Install Leveling Legs

⚠ WARNING

Excessive Weight Hazard

Use two or more people to move and install washer/dryer.

Failure to do so can result in back or other injury.

To protect the floor, use a large flat piece of cardboard from the shipping carton. Gently place the washer/dryer on its side, on the cardboard.

Install the rear leveling legs

1. Push legs into holes in rear corners until they snap into place.

2. Check adjustability of rear legs by pushing in one leg. The other leg should come out. Check both legs. If they do not move freely, repeat Step 1.

Install the front leveling legs

1. Examine the front leveling legs. Find the diamond marking.
2. Screw front legs by hand, into the holes in the triangular braces in the front corners. Use wrench to finish turning the legs until the diamond marking is no longer visible.

3. Slowly stand the washer/dryer upright.

Remove Foam Packing

1. Open the washer lid. The latch under the dryer will keep the lid open.
2. Pull the foam packing ring out of the washer.

NOTE: Keep the foam ring and use it when transporting your washer/dryer. This packing material is used to keep the washer tub stable during transport.

Connect Drain Hose

Proper connection of the drain hose protects your floors from damage due to water leakage. To keep the drain hose from coming off or leaking, it must be installed according to the following instructions:

IMPORTANT: To ensure proper installation, this procedure must be followed exactly.

1. Check the drain hose to see whether it is the proper length.
2. Wet the inside of the straight end of the drain hose with tap water.

IMPORTANT: Do not use any lubricant other than water.

3. Squeeze ears of the silver double-wire clamp with pliers to open. Place clamp over the straight end of the drain hose 1/4" (6.4 mm) from the end.

4. Open clamp. Twist hose back and forth while pushing onto drain connector on the side of the washer/dryer. Continue until hose contacts the ribbed stops on the cabinet.

5. Place clamp over the area marked "CLAMP." Release clamp.

For laundry tub or standpipe drain systems

1. Make sure drain hose form is in correct position.

A. Drain hose form

2. Put the hooked end of drain hose into laundry tub or standpipe. Rotate hook to eliminate kinks.

To keep drain water from going back into the washer:

- Do not force excess drain hose into standpipe. Hose should be secure but loose enough to provide a gap for air.
- Do not lay excess hose on the bottom of the laundry tub.

For use with floor drain

Do not install the drain hose form onto the corrugated drain hose. You may need additional parts. See Floor drain under "Tools and Parts."

Connect Inlet Hoses

1. Insert a new flat washer into each end of the inlet hoses (not provided). Firmly seat the washers in the couplings.

A. Coupling
B. Washer

Connect the inlet hoses to the water faucets

Make sure the washer basket is empty.

1. Attach hose to the hot water faucet. Screw on coupling by hand until it is seated on the washer.
2. Attach hose to the cold water faucet. Screw on coupling by hand until it is seated on the washer.

3. Using pliers, tighten the couplings with an additional two-thirds turn.

NOTE: Do not overtighten or use tape or sealants on the valve. Damage to the valves can result.

Clear the water lines

- Run water through both faucets and inlet hoses, into a laundry tub, drainpipe, or bucket to get rid of particles in the water lines that might clog the inlet valve screens.
- Check the temperature of the water to make sure that the hot water hose is connected to the hot water faucet and that the cold water hose is connected to the cold water faucet.

Connect the inlet hoses to the washer

1. Attach the hot water hose to the bottom inlet valve. Attaching the hot water hose first makes it easier to tighten connection with pliers.
2. Screw on coupling by hand until it is seated on the washer.
3. Using pliers, tighten the couplings with an additional two-thirds turn.

NOTE: Do not overtighten or use tape or sealants on the valve. Damage to the valves can result.

A. Cold water inlet valve (top)
B. Hot water inlet valve (bottom)

4. Attach the cold water hose to the top inlet valve.
5. Screw on coupling by hand until it is seated on the washer.
6. Using pliers, tighten the couplings with an additional two-thirds turn.

NOTE: Do not overtighten or use tape or sealants on the valve. Damage to the valves can result.

If you are working in a closet or recessed area

Move the washer/dryer into its final location and remove cardboard from under washer/dryer. Remove the access panel by removing three Phillips-head screws and one bumper, located at the top of the access panel. Set panel, screws, and bumper aside. Complete hookup of water hoses and (on gas models) the flexible gas connector through the access area. Replace access panel upon completion of washer/dryer installation.

Check for leaks

- Turn on the water faucets and check for leaks. A small amount of water might enter the washer. You will drain this water later.

NOTE: Replace inlet hoses after 5 years of use to reduce the risk of hose failure. Record hose installation or replacement dates for future reference.

- If you connect only one water hose, you must cap off the remaining water inlet port.
- Periodically inspect and replace hoses if bulges, kinks, cuts, wear, or leaks are found.
- The apparatus must be connected to the water faucets using the new hoses. Do not use old hoses.

Secure Drain Hose

1. Move the washer/dryer to its final location and remove any cardboard used to move the washer/dryer.
2. Locate the plastic strap included in the parts package.

Plastic strap

3. Wrap the drain hose to the laundry tub leg or standpipe with the plastic strap (A or B below) and secure.

If the water faucets and the drain standpipe are recessed, put the hooked end of the drain hose in the standpipe. Tightly wrap the plastic strap around the water inlet hoses and the drain hose (C above).

Plan Vent System

Choose your exhaust installation type

Recommended exhaust installations

Typical installations vent the dryer from the rear of the washer/dryer. Other installations are possible.

A. Dryer
B. Rigid metal or flexible metal vent
C. Clamps
D. Wall

E. Elbow
F. Clamps
G. Elbow
H. Exhaust hood

Optional exhaust installations

This washer/dryer can be converted to exhaust out the right or left side. To convert the washer/dryer, use Side Exhaust Kit Part Number 279823. If your washer/dryer was previously exhausted from the right or left side, it can be converted to rear exhaust by using standard offset connections. To cover the hole in the side, one of the following plugs can be added:

692790 (white)

3977784 (biscuit)

Follow the instructions in the kit to install. Kits are available from the dealer from whom you purchased your washer/dryer.

A. Standard rear offset exhaust installation
B. Rear exhaust for offset close clearance connection
C. Left or right side exhaust installation

Alternate installations for close clearances

Venting systems come in many varieties. Select the type best for your installation. Three close-clearance installations are shown. Refer to the manufacturer’s instructions provided with the vent system.

A. Loop system with standard elbows
B. Loop system with one offset and one standard elbow
C. Vent system with one periscope (2" [51 mm] clearance)

NOTE: The following kits for close clearance alternate installations are available for purchase. Please reference the “Assistance or Service” section of the Washer/Dryer User Instructions.

- Over-the-Top Installation:
Part Number 4396028
- Periscope Installation (For use with dryer vent to wall vent mismatch):
Part Number 4396037 - 0" (0 mm) to 18" (457 mm) mismatch
Part Number 4396011 - 18" (457 mm) to 29" (737 mm) mismatch
Part Number 4396014 - 29" (737 mm) to 50" (1.27 m) mismatch

Special provisions for mobile home installations

The exhaust vent must be securely fastened to a noncombustible portion of the mobile home structure and must not terminate beneath the mobile home. Terminate the exhaust vent outside.

Determine vent path

- Select the route that will provide the straightest and most direct path outdoors.
- Plan the installation to use the fewest number of elbows and turns.
- When using elbows or making turns, allow as much room as possible.
- Bend vent gradually to avoid kinking.
- Use the fewest 90° turns possible.

Determine vent length and elbows needed for best drying performance

- Use the Vent system chart below to determine type of vent material and hood combinations acceptable to use.
NOTE: Do not use vent runs longer than those specified in the Vent system chart. Exhaust systems longer than those specified will:
 - Shorten the life of the dryer.
 - Reduce performance, resulting in longer drying times and increased energy usage.

The Vent system chart provides venting requirements that will help to achieve the best drying performance.

Vent system chart

NOTE: Side exhaust installations add a 90° turn inside the dryer. To determine maximum exhaust length, add one 90° turn to the chart.

Number of 90° turns or elbows	Type of Vent	Box or Louvered hoods	Angled hoods
0	Rigid metal	43 ft (13.1 m)	36 ft (11.0 m)
1	Rigid metal	33 ft (10.1 m)	26 ft (7.9 m)
2	Rigid metal	23 ft (7.0 m)	16 ft (4.9 m)

Install Vent System

1. Install exhaust hood. Use caulking compound to seal exterior wall opening around exhaust hood.
2. Connect vent to exhaust hood. Vent must fit inside exhaust hood. Secure vent to exhaust hood with 4" (102 mm) clamp.
3. Run vent to dryer location. Use the straightest path possible. See "Determine vent path" in "Plan Vent System." Avoid 90° turns. Use clamps to seal all joints. Do not use duct tape, screws, or other fastening devices that extend into the interior of the vent to secure the vent, because they can catch lint.

Level Washer/Dryer

Properly leveling your washer/dryer avoids excessive noise and vibration.

1. Check the levelness of the washer/dryer by placing a level on the top edge of the washer, first side to side, then front to back.

2. If the washer/dryer is not level, prop up the front with a wood block and adjust the feet up or down as necessary. Remove wood block and lower washer/dryer. Repeat this step until the washer/dryer is level.

Connect Vent

1. Using a 4" (102 mm) clamp, connect vent to exhaust outlet in washer/dryer. If connecting to existing vent, make sure the vent is clean. The vent must fit over the exhaust outlet and inside the exhaust hood. Make sure the vent is secured to exhaust hood with a 4" (102 mm) clamp.
2. Move washer/dryer into its final location. Do not crush or kink vent. Make sure washer/dryer is level.

Complete Installation

1. Check that all parts are now installed. If there is an extra part, go back through the steps to see which step was skipped.
2. Check that you have all of your tools.
3. Dispose of/recycle all packaging materials. Keep the plastic foam for use if the washer/dryer should be transported.
4. Check the washer/dryer's final location. Be sure the vent is not crushed or kinked.
5. Check that the washer/dryer is level and front leveling feet are tight. See "Level Washer/Dryer."
6. For power supply cord installations, plug into an outlet. For direct wire installation, turn on power.
7. Check that the water faucets are on.
8. Check for leaks around faucets and inlet hoses.
9. Remove the blue protective film on the console and any tape remaining on the washer/dryer.
10. Read the Washer/Dryer User Instructions.
11. Wipe the dryer drum interior thoroughly with a damp cloth to remove any dust.
12. To test the washer, measure $\frac{1}{2}$ the normal recommended amount of detergent and pour it into the washer. Close the lid. Select the REGULAR cycle and pull out the Cycle Control knob. Allow the washer to complete one whole cycle.
13. To test the dryer, set the dryer on a full heat cycle (not an air cycle) for 20 minutes and start the dryer.

If the dryer will not start, check the following:

- Controls are set in a running or "On" position.
 - Start button has been firmly pushed.
 - Washer/dryer is plugged into a grounded outlet and/or electrical supply is on.
 - Household fuses are intact and tight, or circuit breakers have not tripped.
 - Dryer door is closed.
14. When the dryer has been running for 5 minutes, open the dryer door and feel for heat.
- If you do not feel heat, turn off the dryer and check the following:**
- There may be 2 household fuses or circuit breakers for the dryer. Check that both fuses are intact and tight, or that both circuit breakers have not tripped. If there is still no heat, contact a qualified technician.

NOTE: You may notice an odor when dryer is first heated. This odor is common when the heating element is first used. The odor will go away.
